Unemployment Bulletin

New Hampshire Announces New Unemployment Insurance System

Situation

The New Hampshire Department of Employment Security (NHDES) is taking an important step forward by implementing a new Unemployment Insurance (UI) system this month. The Web-based system features many enhancements, including employer access to certain UI claim-related functions.

What Employers Need to Know

Notices about the new online system were recently mailed to employers by the NHDES. While employers need to be aware of the system and should securely retain the notice document in their files, we caution our clients against registering at this time.

TALX manages unemployment claims, benefit charges and appeals for the majority of our clients. Registering for online access could inadvertently create a lapse in our established processes between you, our offices and the state UI agency, possibly resulting in missed claims or misdirected documents.

As your representative, TALX is able to register, so for the moment you need not take action.

What You Can Expect

TALX is excited about the possibilities presented by the new UI system. We will be thoroughly reviewing all aspects of its functionality to determine how to best utilize it in serving our employer clients. We will keep you informed of future developments.
